What do I need for a Video Assessment?

Video Interview Support - Nam - 2019-06-20 - 0 Comments - in Getting started and tips

To complete your video assessment, all you will need is a computer or laptop with a webcam, or a mobile device (iPhone, iPad, iPod or Android Device). However you take the video assessment, you will require internet access. We recommend connecting to the internet over wifi or through an ethernet (cable) connection, but you will be able to complete the video assessment on slower connections, as long as the connection is constant.
